Part Number	Description
MS-70	71 g x 0.0001 g (0.001% / 0.01% / 0.1% moisture content)
MX-50	51 g x 0.001 g (0.01% moisture content)
MF-50	51 g x 0.002 g (0.05% moisture content)
ML-50	51 g x 0.005 g (0.1% moisture content)

Comparison between MS-70 and the KF (Karl Fischer) method

Example of PET plastic pellet measurement

	Moisture rate		Average measurement time	Measurement conditions	
	Average value	Repeatability (standard deviation)			
MS-70	0.298%	0.0045%	6.8 mins	Heating temperature	180°C
				Test sample	10g
				Measurements	5 times
KF method	0.307%	0.0065%	19.1 mins	Heating temperature	180°C
				Test sample	0.3g
				Measurements	5 times

KF method: a way of measuring moisture content through chemical determination

With PET plastic and other materials, the MS-70 can measure a drop of moisture content of less than 1%. Specialist knowledge is not necessary to operate the MS-70, and since measurement occurs quickly no harmful waste is produced.

Don't Forget About Our Product Inspection Systems!

Product Inspection protects consumers and brands through 100% inspection. By identifying contaminants, deformities and ensuring product quality and weight with our In-motion Checkweighers, Metal Detectors, and X-ray Systems companies can save on rework, recall, and wasted product and packaging materials. can be programmed to work specifically for your products. Features like masking, missing components and misshaped product detection and identify a variety of contaminants including bone, plastic, metal and glass come standard.

In-motion Checkweighers

If product giveaway and fill is of concern, checkweighers are an excellent solution. Our line of checkweighers are modular, easy to incorporate into your existing line, have a small footprint, and are efficient with the ability to process up to 400 pieces per minute! Pair with a rejector to automate the rejection process.

Metal Detectors

In facilities with metal machinery and risk of metal contamination, our metal detectors can detect ferrous, non-ferrous and stainless steel pieces as small as 0.2 millimeters that's smaller than a grain of sand! These metal detectors are stainless steel and wash down rated for easy cleaning and maintenance.

X-ray Systems

The ProteX X-ray series is a smart inspection system that can be programmed to work specifically for your products. Features like masking, missing components and misshaped product detection and identify a variety of contaminants including bone, plastic, metal and glass come standard.
